Course Learning Outcomes (CLOs)

After successful completion of this course, students are able to

- 1) CLO1 model deterministic systems and differentiate between nonlinear and linear models.
- CLO2 numerically simulates linear and non-linear ordinary differential equations and deterministic systems.
- 3) CLO3 estimates and validates a model based upon input and output data.
- 4) CLO4 creates a model prediction based upon new input and validates the output data.
- 5) CLO5 comprehends and apply theory-based understanding of fundamentals of knowledge in the selected discipline area to predict the effect of activities.
- 6) CLO6 apply natural, physical and biological sciences, mathematics, statistics, computer and information sciences to applications
